SUBUNIT: Principally an homodimer, but also found as a monomer.
Associates with p56-LCK. Interacts with TRAF1, TRAF2 and TRAF3 (By

similarity).
-1. SUBCELLULAR LOCATION: Type I membrane protein.
-1. TISSUB SPECIFICITY: Expressed on the surface of activated T cells.
-1. INDUCTION: Optimal by PMA and ionomycin.
-1. SIMILARITY: Contains 4 TNFR-Cys repeats.

                                                                                                                                                                                                                                                                  01-FEB-1991 (Rel. 17, Created)

01-FEB-1991 (Rel. 17, Last sequence update)
25-OCT-2004 (Rel. 17, Last annotation update)
Tumor necrosis factor receptor superfamily member 9 precursor (4-1BB ligand receptor) (T-cell antigen 4-1BB) (CD137 antigen).
Name=Tnfrsel; Synonyms=Cd137, Cd157, ILA, Ly63;
Mus musculus (Mouse).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE=93139510; PubMed=7678621;

This is the amino acid sequence encoding the human 112C2 T cell protein. The 112C2 proteins are expressed in thymus cells and are induced on T cells and spleen cells following activation. Engagement of 112C2 atimulates proliferation of T cell clones, antigen-specific proliferation and cytokine production by T-cells, and potentiates T cell expansion or apoptosis. The products can be used in the treatment of conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions or degenerative conditions. They can be used in the regulation or development of haematopoietic cells,

. 9.9

Isolated 312C2 T cell gene - used to develop products for treating, cancers, auto-immune disorders, transplantation rejection and other cell disorders.

                                                                                                tumour necrosis factor receptor family. The sequence was deduced from a bone marrow cDNA clone (see AAX87670). Methods for the recombinant production of PRO364 polypeptides, e.g. in CHO, Escherichia coli or yeast host cells, are provided. Claimed polypeptides comprise amino acids 1-241, 1-X, 26-241 (i.e. the mature protein) and 26-X of the present PRO364 polypeptides are useful for modulating apoptosis, NF-KB activation and proinflammatory or autoimmune responses in mammalian cells (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                          chimeric molecules comprising a PRO364 polypeptide fused to a heterologous sequence such as epitope tag or immunoglobulin Fc region are also claimed. PRO364 can be used in assays to identify other proteins or molecules involved in binding interactions. This is useful for identifying inhibitors or agonists of receptor/ligand binding. The PRO364 polypeptides may also be combined with an agent that is cytotoxic, chemotherapeutic or a growth inhibitor. PRO364 antibodies are useful in diagnostic methods, purification methods and also in therapy, e.g. as inhibitors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180

Sixty four PRO polypeptides, useful in the diagnosis and treatment of immune related disorders, e.g. systemic lupus erythematosis, rheumatoid arthritis, osteoarthritis, thyroiditis and diabetes mellitus.

Claim 33; Fig 36; 309pp; English

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoathritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is the human PRO364 protein, encoded by the cDNA clone, designated as DNA47365-1206. It is isolated from human small intestine tissue CDNA library, identified using probes based on the consensus sequence DNA4835. relative to the Incyte expressed sequence tag (EST) 3003460. This EST has homology to tumour necrosis factor receptor (TNRR) family of polypeptides. PRO364 sequence also shows homology to members of the TNR family and mouse GITR protein. This assigned the ATCC deposit No: 209436. PRO364 functions as a neoplastic cell growth inhibitor and is used for treating tumours, using an effective amount of PRO655, PRO364 and PRO344. This composition is especially useful for treatment of human cancers such as breast, prostate, colon, lung, renal, ovarian and CNS, leukemia and melanoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of human tumour necrosis factor receptor-
like protein TR11 (see also AAY95879), a novel protein showing identity
to murine glucocorticoid induced tumour necrosis factor receptor family-
related gene. The invention provides highly conserved TR11, TR115V1 and
TR115V2 proteins (see AAY95879-81), as well as vectors, host cells and
recombinant methods for their production. TR11, TR115V1 and/or TR115V2
polypeptides are useful for treating, preventing, prognosis and/or
diagnosis of an immunodeficiency, especially common variable

immunodeficiency, X-linked agammaglobulinemia, severe combined immunodeficiency (SCID), Wiskott-Aldrich syndrome or X-linked immunoglobulin deficiency with hyper IgM. TR11, TR11SV1 and/or TR11SV2 antagonists (e.g. antibodies) are used to treat, prevent, prognose and/or diagnose an autoimmune disease, especially rheumatoid arthritis, systemic lupus erythematosus, thrombocytopenia purpura or IgA nephropathy. The polypeptides, polynucleotides and/or antibodies can be administered to cells in vitro, ex vivo or in vivo or to a multicellular organism. Soluble forms of the polypeptides may also be used. Methods for screening for agonist/antagonist compounds are also provided
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

This sequence represents PRO364 polypeptide, which is a human glucocorresponding ligand (horTRL), PRO475, is given in ABA47056. PRO364 and PRO175 may be used in a mixture with a cardiovascular, endothelial, angiogenic or angiostatic disorder. The PRO364 cDNA sequence was isolated from an expressed sequence tag (EST) database as having the phomology to members of the tumour necrosis factor receptor (TNPR) family of polypeptides. The PRO175 cDNA sequence was isolated from a library of comparting an effective amount of PRO364 or PRO175 cr their antagonists is useful for treating cardiac hypertrophy (which is antagonists is useful for treating cardiac hypertrophy (which is an elevated level of PGF 2alpha), trauma, a cancer, or age-related macular degeneration in a human. Administering a therapeutically effective amount of an antibody that binds PRO364 or PRO175 is useful for inhibiting angiogenesis induced by PRO364 or PRO175 in a human suffering from a tumor or a retinal disorder. PRO364 or PRO175, or their antagonists, are useful for vascular-related drug targeting or as therapeutic cancer, or age antagonists, are useful for recatment or prevention of atheroscales. PRO364 or PRO175, or their antagonists, are useful for recatment or prevention of atheroscales.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         hypertension, inflammatory vasculitides, Reynaud's disease, aneurysms, arterial restenosis, thrombophlebitis, tumor angiogenesis, gut protection or regeneration and treatment of lung or liver fibrosis, periodontal

The nucleic acids and the proteins they encode may be used in the prevention, treatment and dispnosis of diseases associated with inappropriate PRO expression such as cardiovascular, andothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCs) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. The present sequence is that of novel human immunomodulator PR0364 (100019), as deduced from CDNA (see AAR3007) isolated from a small intestinal library. PR0364 (26 kDa, pI 6.34) shows sequence homology to mouse GITR protein and may be lite human counterpart. The invention counterpart proteins of see AAR30056-62) encoding in ovel human PR0 proteins (see AAB20108-20) including PR0364. Claimed compositions comprising these proteins or their agonists are useful for increasing infiltration of inflammatory cells into a tissue of a mammal, stimulating comprising a nammal in response to an antigen. Claimed compositions or enhancing an immune response, or increasing the proliferation of I.

Or captusing a PR0 polypeptide or its antigen. Claimed compositions comprising a PR0 polypeptide or its antigen. Claimed compositions or enhancing an immune response to an antigen. Claimed compositions comprising a PR0 polypeptide or its antigen. Claimed compositions or call disorder, involves administering a PR0 polypeptide, an agonist call processor antibody or an antagonist antibody. The disorder is selected from antibody or an antagonist antibody. The disorder is selected from systemic lupus erythemacosus, rheumatory polypethide, an agonist call proposition and processor of systemic athritis, spondyloarthropathy, systemic selected from systemic athritis, succionarie, autoimmune heamlylic antibody and the systemic composition and processor (such as multiple sclerosis), immunelylatis, inflammatory bowel disease (such as multiple sclerosis), antendent control of seases, gluth and psoriasis), allergic diseases (such as multiple sclerosis), immunelylated skin diseases of the lung and transplantation associated diseases (such as graft rejection and graft-versus-host comprise detecting the level of separession of the PRO polypeptide, vectors, host cells arising proder such as graft rejection and graft-versus-host cells in amethod of stimulating the proliferation of T lymphocytes using PR0364
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SGGHEGHCKPWIDCIQFGFLIVFPGNKTHNAVCVPGSPPAEPLGWLTVVLLAVAACVLLL 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to novel human angiogenesis-associated proteins designated PRO proteins (AAB53064-B53097), and to nucleic acids encoding PRO proteins. The invention also relates to vectors and host cells comprising a PRO nucleic acid, the recombinant production of a PRO protein, PRO antibodies specific for a PRO protein, fusion proteins comprising a PRO protein, agonists or antagonists of a PRO protein, and

compounds which inhibit the expression of a PRO gene. The invention additionally encompasses methods of identifying medulators of PRO corpsision or activity, diagnosing a cardiovacular, endothelial or angiogenic disorder, or a susceptibility to such a disorder by detecting mutations in a PRO gene, or the expression level of a PRO gene within a comparison or a trace of the administration of a PRO protein, PRO nucleic acid, or PRO agonist or antagonist; a retroviral gene therapy vector comprising a promise acid, and methods of inhibiting or stimulating endothelial call growth, cardiac hypertrophy or PRO-induced angiogenesis via the administration of a PRO protein, or an agonist or antagonist thereof. PRO administration of a PRO protein, or an agonist or antagonist, proceeding, and the administration of a PRO protein, or an agonist or antagonist, thereof. Or agonists and PRO antagonists may be used as therapeutic agents to treat cardiovascular, endothelial or angiogenic disorders, such as approached and proteins, who agonists and proteins, wounds, cancer, Alzheimer's disease, Huntington's disease, or stroke. PRO nucleic acids are additionally useful in the recombinant production of PRO proteins, as hybridisation probes to screen libraries to isolate cDNAs with sequence identity to PRO proteins, to analyse genetic disorders, and in genee therapy. PRO nucleic acids can also be used to produce transgenic animals useful for the development and screening of potential therapeutic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequences given in AAB47287-90 show PRO polypeptides. PRO175 shows type II transmembrane protein typology, and portions of PRO364 show homology to members of the tumour necrosis factor (TNP) family, thereby indicating that it may be a novel member of the TNP family. PRO175 and PRO185 stimulated heart hypertrophy. PRO cDNA's may be used to identify a compound that inhibits PRO, diagnosing a cardio-vascular, endothelial or angiogenic disorder in a memmal by detecting PRO cDNA, treating and cardiovascular, endothelial or angiogenic disorder in a mammal, and inducing cardiac hypertrophy or inhibiting endothelial cell growth or angiogenesis in a mammal. The mammal is a human which has suffered myocardial infarction, cardiac hypertrophy characterized by the presence of elevated PGF Zalpha, trauma, cancer or age-related macular degeneration. Trauma includes wounds or burns. Other treatable diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated PRO polypeptide useful in treating and diagnosing a cardiovascular, endothelial or angiogenic disorder e.g. cancer, diabetes mellitus, myocardial infarction, arthritis.

                                                                                                                      07-DEC-2000
The present sequence is one of seventeen novel PRO polypeptides. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating cardiovascular, endothelial or angiogenic disorders in a mammal. Examples of these disorders include cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, Reynaud's disease, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis and lymphangitis. The PRO polypeptides and antagonists are also used to prevent tumour angiogenesis and for treating periodontal diseases. They are also used to etimulate wound healing and tissue regeneration. The PRO nucleic acids, polypeptides and anti-PRO antibodies are useful for diagnosing a cardiovascular, endothelial or angiogenic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

The present invention relates to novel antibodies or their portion which specifically bind tumour necrosis factor (TNF) receptor-related protein specifically bind tumour necrosis factor (TNF) receptor-related protein splice variants, TR11SV1 or TR11SV2. Sequences of the invention are conditions associated with aberrant expression and/or activity of TR11, TR11SV1 and TR11SV2 polypeptides, e.g., autoimmune diseases such as autoimmune haemolytic anaemia, allergic encephalomyelitis, multiple colleges, systemic lupus erythematosus, Goodpasture's syndrome, diabetes mellitus, rheumatoid arthritis, Sjogren's syndrome, scleroderma with anti-collagen antibodies, urticaria, conditions such as respiratory disorders (e.g. asthma, allergy), allergic reactions such as respiratory calisorders (e.g. asthma, allergy), allergic reactions such as asthma, graft-versus-host-disease, transplantation rejections, type II collagen-conditions active cancer), cardiovascular disorders (atherosclerosis, myocarditis), gastrointestinal disorders (atherosclerosis, myocarditis), gastrointestinal conditions and disorders (e.g. traumatic brain nigury, Alzheimer's disease, stroke) and disorders characterised by inflammation (e.g. gout, trauma, septic shock). They are used for modulating haemostatic or thrombolytic activity and thus is used for treating blood coagulation disorders, the blood platelet disorders (e.g. thrombocytopaenia) or wounds resulting from trauma, surgery or other causes. Polymucleotides of the invention are useful in gene therapy and immuno therapy. The present sequence is human TR11 receptor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

The present invention relates to the isolation of novel members of the tumour necrosis factor (TNP) family of receptors, referred to as TNF creeptor-related proteins and designated TR11, TR11SV1 and TR11SV2 represent splice variants of TR11. The invention also discloses the polymucleotide sequences encoding the TR11 receptors, and a creeptors in mammals. The method of the invention is useful for inhibiting the binding of endokine-alpha binding to endogenous endokine-alpha creeptors in amammal, preferably humans. The method is useful for inhibiting or preventing immunodeficiency (SCID) x linked, Bruton's disease (e.g. severe combined immunodeficiency (SCID) x linked, Bruton's disease.

O'sgammaglobulinaemia), and autoimmune diseases (e.g. systemic lupus erythematosus (SLB), rheumatoid arthritis, dermatitis, allergic conversed to the present sequence represents human TR11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
OX40 antigen precursor - rat
NiAlternate names: nerve growth factor receptor homolog
C;Species: Rattus norvegicus (Norway rat)
C;Species: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 09-Jul-2004
C;Accession: S12783; S08036
R;Mallett, S.; Fossum, S.; Barclay, A.N.
EMBO J. 9, 1063-1068, 1990
A;Title: Characterization of the MRC OX40 antigen of activated CD4 positive T lymphocytes
A;Reference number: S12783; MUID:90214614; PMID:2157591
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cross-references: UNIPROT:P15725; EMBL:X17037; NID:g57830; PIDN:CAA34897.1; PID:g57831; Superfamily: CD27 antigen; NGF receptor repeat homology; Keywords: growth factor receptor; transmembrane protein; 1-19/Domain: signal sequence #status predicted <SIG> 1-19/Domain: signal sequence #status predicted <ARG> 1-10/Domain: transmembrane #status predicted <ARG> 211-235/Domain: transmembrane #status predicted <ARM>

C;Comment: This receptor, a member of the tumor necrosis factor receptor family, belongs
tresia, activates a cell death and/or survival signaling cascade.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Fil21/Domain: signal sequence #status predicted <SIG>

IsoId=09Y5U5-2; Sequence=VSP 006508;
IsoId=09Y5U5-2; Sequence=VSP 006508;
IsoId=0PECIFICITY: Expressed in lymph node, peripheral blood leukocytes and weakly in spleen.
-!- INDUCTION: Up-regulated in peripherical mononuclear cells after antigen stimulation/lymphocyte activation.
-!- SIMILARITY: Contains 3 TNFR-Cys repeats.
                         "The secreted protein discovery initiative (SPDI), a large-scale effort to identify novel human secreted and transmembrane proteins:
                                                                                                                         "Signal peptide prediction based on analysis of experimentally verified cleavage sites.";
Protein Sci. 13:2819-2824 (2004).
-:- FUNCTION: Receptor for TMFSTB. Seems to be involved in interactions between activated T lymphocytes and endothelial and in the regulation of T cell receptor-mediated cell death.
Mediated NF-kappa-B activation via the TRAFZ/NIK pathway.
-:- SUBUNIT: Binds to TRAFI, TRAFZ, and TRAFZ) but not TRAFS and

    similarity).
    SUBCELIULAR LOCATION: Type I membrane protein.
    TISSUE SPECIFICITY: Expressed on the surface of activated T cells.
    INDUCTION: Optimal by PMA and ionomycin.
    SIMILARITY: Contains 4 TNFR-Cys repeats.

                                            01-FEB-1991 (Rel. 17, Last sequence update)
25-OCT-2004 (Rel. 45, Last annotation update)
Tumor necrosis factor receptor superfamily member 9 precursor (4-1BB ligand receptor) (T-cell antigen 4-1BB) (CD137 antigen)

Immunol. 150:771-781(1993).
-!- FUNCTION: Receptor for INFSF14/4-1BBL. Possibly active during T cell activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -!- SUBUNIT: Principally an homodimer, but also found as a monomer. Associates with p56-LCK. Interacts with TRAF1, TRAF2 and TRAF3
                                                                                                                                                             Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

Eur. J. Immunol. 25:926-930(1995).

-!- FUNCTION: Receptor for INPSR4/OX40L/GP34.

-!- SUBGNIT: Interacts with TRAF2, TRAF3 and TRAF5 (By similarity).

-!- SUBGRILUTAR LOCATION: Type I membrane protein.

-!- SIMILARITY: Contains 4 INFR-Cys repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;
